	ALTERED ABOVE CEILING					ALTERED BELOW CEILING												
	DESCRIPTION OF WORK TO BE DONE																	

This affidavit cannot be submitted when flexible piping products are going to be used.

The use of flexible piping products will require a full set of plans and calculations to be submitted for review.

There is no change in occupancy classification or hazard classification.

Addition of sprinklers when the Room Design method (NFPA 13; 11.2.3.3) is used, if it is clearly explained and easily apparent that the additional piping/head(s) will not exceed the hydraulic design of the existing system and the following information is shown on the plans:

1. Wall fire-resistance rating (NFPA 13: 11.2.3.3.3; must meet Table 11.2.3.1.2, 30-minute minimum is required), and
2. Door lintel height (8" minimum; 13: 11.3.3.5(2) and
3. Opening protection (Must meet 11.2.3.3.5). This information is required to verify applicability and design area.

All work is limited to drops and armovers in a light-hazard occupancy with like sprinkler heads, i.e standard response and quick response.

Positions of sprinkler heads relative to architectural features such as soffits, beams, partitions, walls, etc. complies with the current adopted edition of NFPA 13.

The proposed work does not require hydraulic calculations because sprinklers use standard spacing and are not extended coverage or other specialized type of sprinkler.

Only one sprinkler head will be installed from one drop
(exception: up to two heads from one drop may be installed when each head is in a separate fire area).

The area covered per sprinkler head is limited to the spacing requirements of NFPA 13.

Tenant improvements in a new building shall be equipped with Quick Response heads *(see 2007 NFPA 13, Section 8.3.3.1)*

The installation shall comply with the requirements of the current adopted edition of NFPA 13.

Piping shall not be concealed until hangers and bracing are inspected.

Final approval shall be subject to onsite tests and inspections.

A statement of compliance, with the minimum information as specified in Fire Code of New York State - Section 901.2.1, will be given to the Office of the Fire Marshal prior to or at final approval.

I understand a sketch is required to be attached to this document showing the area of work within the building's structure, and a copy of this document shall be available for all inspections.

I, _____, certify that the following is true and reasonably defines the scope of work for this project.
